PROFESSIONAL SUMMARY

- Software Developer with 4 years of experience building backend, cloud-native, and full-stack features across financial services and healthcare platforms using Java, Python, Spring Boot, FastAPI, RESTful APIs, Microservices, SQL, and TypeScript.
- Experienced in secure transaction and healthcare workflow services with Spring Security, OAuth 2.0, JWT, Input Validation, Hibernate/JPA, PostgreSQL, and SQL Optimization, improving response times by up to 32%.
- Hands-on with AWS, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, CI/CD Pipelines, Postman, and Swagger UI to support scalable deployments, API validation, and release consistency.
- Practical background in Redis caching, Apache Kafka event processing, React, Azure OpenAI, LangChain, Logging, Monitoring, Unit Testing, and Integration Testing for production-ready backend systems.

TECHNICAL SKILLS

Programming & Frontend: Java, Python, Go, TypeScript, JavaScript, React, HTML5, CSS3, SQL

Backend Development: Spring Boot, FastAPI, Node.js, RESTful APIs, Microservices, OpenAPI/Swagger, Swagger UI, Design Patterns

Cloud & DevOps: AWS EC2, AWS ECS, AWS Lambda, AWS S3, AWS IAM, AWS CloudWatch, Docker, Kubernetes, Terraform

CI/CD & Build Tools: Jenkins, GitHub Actions, CI/CD Pipelines, Maven, Git

Databases, Messaging & Caching: PostgreSQL, SQL Optimization, Data Modeling, Hibernate/JPA, Redis, Apache Kafka

Security & API Reliability: Spring Security, OAuth 2.0, JWT, Secure Coding, API Security, Input Validation, Error Handling

Testing & Observability: Postman, JUnit, Mockito, Unit Testing, Integration Testing, Debugging, Logging, Monitoring, Performance Optimization

AI & Engineering Practices: Azure OpenAI, LangChain, LLM Integration, Agile/Scrum, Code Reviews, System Design

PROFESSIONAL EXPERIENCE

Software Developer

May 2023 - Present

Goldman Sachs | Richardson, TX

- Engineered Python and FastAPI services for financial transaction workflows, using RESTful APIs, OpenAPI/Swagger, Microservices, and SQL to improve response time by 32% across internal platform requests.
- Protected financial API traffic with Spring Security, OAuth 2.0, JWT, Input Validation, Error Handling, and Secure Coding, reducing API defects by 27% during release testing.
- Rebuilt backend modules into Dockerized Microservices with Python, FastAPI, Kubernetes, Design Patterns, and System Design practices, enabling faster independent deployments across transaction services.
- Streamlined CI/CD Pipelines through Jenkins, GitHub Actions, Docker, Kubernetes, Maven, and Git, cutting release cycles by 40% across recurring platform updates.
- Configured AWS environments with Terraform, AWS EC2, AWS ECS, AWS S3, AWS IAM, and AWS CloudWatch, improving consistency across financial application deployments.
- Embedded Azure OpenAI and LangChain into Python and FastAPI workflows to summarize operational inputs, reducing manual review effort by 30% for internal process teams.
- Tuned PostgreSQL queries, Data Modeling, Redis caching, and API response handling, reducing repeated database calls during peak financial transaction processing.
- Linked React, TypeScript, JavaScript, HTML5, and CSS3 interfaces with RESTful APIs, improving request handling and frontend-backend reliability across user workflows.

Associate Software Engineer

Jul 2021 - Aug 2022

Legato Health Technologies | Hyderabad, India

- Implemented Java and Spring Boot services for healthcare claims and member workflows, using RESTful APIs, Swagger UI, and SQL to improve service response time by 22%.
- Improved healthcare API validation with JWT, Input Validation, Error Handling, and Secure Coding, reducing recurring request defects by 24% during releases.
- Restructured legacy healthcare modules into Spring Boot Microservices, helping provider and transaction workflows support cleaner updates with less code dependency.
- Supported Jenkins-based release workflows with Docker, Maven, and Git, reducing manual deployment effort by 35% across healthcare test and release environments.
- Migrated Spring Boot services to AWS EC2 with AWS S3 and AWS IAM access controls, improving secure data availability for healthcare operations teams.
- Maintained Terraform environment scripts and AWS CloudWatch checks, improving environment consistency across healthcare application stages.
- Refined PostgreSQL queries, Data Modeling, and Hibernate/JPA mappings, reducing query latency by 25% for healthcare reports and service calls.

- Verified backend releases with Postman, JUnit, Mockito, Unit Testing, Integration Testing, Code Reviews, and Agile/Scrum, improving release confidence before production handoff.

PROJECTS

E-Commerce Backend Services & API Platform

- Built API platform services with Java, Go, Spring Boot, Node.js, RESTful APIs, and Microservices to support order and payment workflow routing with cleaner service boundaries and lower-latency processing.
- Containerized platform components with Docker and Kubernetes on AWS ECS, improving deployment consistency and supporting scalable service execution during transaction-heavy workloads.
- Automated cloud delivery using Terraform, AWS IAM, AWS S3, and AWS CloudWatch, reducing manual environment setup across e-commerce application stages.

LLM-Powered Commerce Automation Platform

- Developed Python and FastAPI backend workflows with Azure OpenAI, LangChain, LLM Integration, and Prompt Engineering to classify commerce requests and support faster workflow decisions.
- Designed RESTful APIs with Swagger UI, Postman, Input Validation, Error Handling, Secure Coding, and API Security practices, improving reliability for LLM-assisted backend processing.
- Connected React, TypeScript, JavaScript, HTML5, and CSS3 interfaces with AWS Lambda, Docker, and GitHub Actions workflows, improving access to automated commerce outputs.

Real-Time Event Streaming & Caching Platform

- Created event-driven services with Apache Kafka, Spring Boot, RESTful APIs, and Microservices to process high-frequency application events with faster backend responsiveness.
- Implemented Redis caching for high-demand API lookups, reducing repeated database calls and improving response consistency during peak usage.
- Deployed Dockerized services on Kubernetes and AWS EC2 with AWS CloudWatch, Logging, Monitoring, and Debugging, improving visibility into streaming and caching workloads.

EDUCATION

Master of Science in Computer Science

University of Texas at Arlington | Arlington, TX

Aug 2022 - May 2024

Bachelor of Engineering in Computer Science

Gurunank Institutions of Technical Campus | Hyderabad, India

Jun 2018 - Jul 2022

CERTIFICATIONS

- **Microsoft** Certified: Azure AI Engineer Associate
- Generative AI with Large Language Models - **Coursera**
- Full-Stack Java Development with Spring Boot - **Coursera**
- Deploying and Scaling Spring Boot Applications on AWS - **Coursera**
- Spring Boot 3 Essential Training - **LinkedIn Learning**
- DevOps Foundations: CI/CD - **LinkedIn Learning**
